

First deliverable – Battle of the Neighborhoods

The first deliverable of the capstone project consists in 2 descriptions:

1. A description of the problem and a discussion of the background.
2. A description of the data and how it will be used to solve de problem.

Description of the data and how it will be used to solve de problem.

I will be using the same data from the previous week, where I will be taking all of Toronto's info in order to do a demographics research based on neighborhoods in Downtown Toronto.

The information will mainly come from Foursquare.

In a very general grasp I will be gathering the data, processing it, clustering the data and then conclude with the analysis of the information gathered.

Keep in mind that there are some details or descriptions in the code as to "what I am doing" but the full description on or process will be shown in the final deliverable of the project alongside a presentation with the results/analysis.
